

Lab 3: Strings

Due date: Monday, June 4 at 11:30pm.

Introduction

The purpose of this lab is to give you some practice working with strings in C.

Complete each of the following programs in your lab3 repository folder according to the comments in each file. (Do a pull to download the starter code to your computer.)

The suggested order for writing these programs is:

- `compare.c`
- `truncate.c`
- `strip.c`
- `greeting.c`

We have provided a `Makefile` for your convenience. You do not need to change it. If you run the `make clean` command when you don't have all the executables built, it will report an error. That is not a problem.

Submission

Remember to commit and push all changes to these files before the deadline.
Do not commit any executables or any other files.
